

**SATIN DYE®**

**TECHNICAL FEATURES**

Saphir Satin Dye is a dye specially designed to dye satin. It contains high quality color pigments, providing great coverage and a slight glossy finish. It does not alter the texture of satin. Suitable for dyeing light to dark colors. \*Depending on the original color of the satin, the final result can vary from the color seen on the product label.

**APPLICATIONS**

Suitable for satin shoes and accessories (specially for satin and wedding items).

**DIRECTIONS FOR USE**

**Cleaning**

Clean shoes before dyeing. Wipe with a damp cloth if necessary and let dry. Stuff shoes with tissue paper. Cover the working area with newspaper or cardboard. Use professional tape to cover and protect the shoe areas which we don't want to dye. Wear rubber gloves.

**Dyeing**

- 1- Shake the flask and apply the dye starting first with the seams, then with the heel and finally apply on the rest of the shoe. Do not saturate the surface with too much dye.
- 2- Immediately after having applied the first coat, lightly reapply the dye to the whole shoe, paying particular attention to areas which may appear patchy.
- 3- Let shoes dry away from direct sunlight or heat.
- 4- Protect the surface with Saphir Invulner Ref. 0745.

**NOTES**

Saphir Satin Dye is an aqueous formulation. Therefore, it is not considered hazardous for human health or the environment. Its dyes content makes the final result depend on the satin original color. Different colors of dye can be mixed to obtain the desired result. The content of a pack will dye approximately 2-3 pairs of average size shoes.

Saphir Satin Dye is in accordance with the updated legislation on health, safety and environment.
